

**Leading the way in
on-site shelter solutions.**

CDA has a highly qualified and fully ticketed In-House Installation Team that can travel anywhere in the world.

Company profile.

Leading the Way in On-Site Shelter Solutions!

At Container Domes Australia we pride ourselves on delivering world-class on-site shelter solutions with attention to detail and exceptional service.

As our client, your satisfaction is our number one priority and our highly skilled and knowledgeable team are on hand to support you every step of the way, from the initial design right through to delivery and after-sales support.

We design our shelters with an easy, safe installation process in mind while still maintaining superior integrity, quality and strength. All of our frames and covers are to the highest Australian design standards and our ISO 9001 and AS/NZS 4801 certification ensures we are continuously improving our business to meet growing industry and customer expectations.

The CDA range of shelters have been engineer certified to Level of Importance 2, Terrain Category 2, AS/NZS 1170.2:2011 standards and are wind rated for regions A, B, C and D. We are so confident in the design and quality of our products we back each one with a full 10 year structural warranty, on both the frame and cover, for your complete peace of mind!

Whether you are looking for a single shelter or multiple large-scale workstations, our team at CDA will help you find the perfect on-site shelter solution.

Support Australian manufacturing! Buy Australian made!

As the old saying goes ‘you get what you pay for’ and this is particularly true when it comes to purchasing our Container Domes.

With cheap brands now available on today’s market, it is important to make sure you are purchasing a Container Dome that is up to the task and able to withstand the most extreme weather conditions anywhere in Australia.

It is also important to find out if the manufacturer provides any after-sales service and support, including replacement parts and warranty coverage, for when things don’t go according to plan.

Cheap, imported kits aren’t often made to Australian Standards and can fail when exposed to heavy rain, strong winds and our high levels of UV all year round.

At Container Domes Australia, we are PROUD to manufacture and supply quality Australian Made products that are backed by our highly skilled and professional team and come with a full 10 year structural warranty on both the frame and the cover.

All of our shelters have been designed and engineer certified to withstand the toughest of conditions Australia wide with no need to remove the covers, even in the most extreme weather. Each shelter is made to order, right here in Queensland, using high-quality materials from trusted, Australian brands. All welds are in accordance with Australian Standard AS/NZS 1554.1 and each shelter is certified to Level of Importance 2, Terrain Category 2, for your individual wind region.

Freight.

At Container Domes Australia, we understand that the ability to pack and freight your Container Dome easily is an important part of your purchase.

That's why we pack every Container Dome into steel cradles which allows for both easy loading and unloading.

We are also able to accommodate any custom freight requirements you may have - such as overseas shipping or specialist site loading and unloading - making logistics as smooth and easy as possible.

Relocating to a different site? Simply dismantle and re-pack your Container Dome into the existing cradle for easy transportation anywhere.

Design on time and budget.

Custom designed solutions on time and on budget.

We are the experts when it comes to designing custom Container Domes to suit your individual needs. This is because we don't charge extra fees if your Container Dome needs to be custom designed to suit your site.

Using our in-house design team provides you with quick turnaround times on the design and certification of your shelter, saving you both time and money on the ground.

Design team.

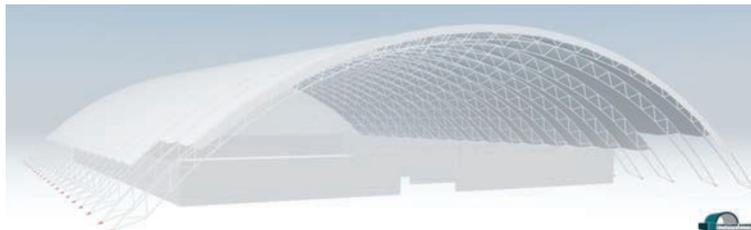

An important part of any custom designed shelter is having an experienced team supporting you and working on your project.

You need to be sure you're getting accurate information and the best advice to suit your individual site requirements.

Quick turnaround times from design to engineering certification are often important, and we specialise in providing the best advice, and the quickest turnaround times, so you can get your project underway without delays.

At Container Domes Australia, we design and build all shelters to applicable Australian standards with a focus on key areas such as;

- Quality products that are built to last.
- Safety on site when installing.
- Quick and easy installation procedures.

Base rails.

What sets us apart from other shelter manufacturers? At Container Domes Australia our wide range of shelters come with base rails as a standard design feature.

And why is this an important feature?

Base rails make the installation process easy and safe and demobilisation simple and stress free. The base rails also create a waterproof seal against the container keeping your undercover area safe and dry. The Dome cover attaches to the base rail, not the container roof, eliminating damage caused to the containers by screwing through the roof and also provides additional waterproofing by stopping leakage under the cover. The base rails also allow for multiple mounting options including containers, posts, walls, roofs and the ground.

Alternative mounting.

No containers? No problem!

Container Domes Australia has your easy, alternative mounting solution.

Our standard range of Container Domes are engineer designed with a base rail as a standard feature. The base rail allows our Container Domes to be easily mounted to a variety of options with no need for any modification work to be done to the Dome itself.

Our Container Domes can be post mounted, wall mounted, roof mounted and ground mounted with no costly design customisation required.

CDA are Australia's experts when it comes to custom designed On-Site Shelter Solutions.

Twistlock bracket.

Container Domes Australia has designed and patented its own twistlock bracket mount system for its standard range of Container Domes.

The twistlock bracket mount system provides the easiest, quickest and safest installation of our Container Domes. The twistlocks lock the base rails of the structure onto the containers eliminating any bolting, screwing, welding or hot works on site and causes zero damage to the containers during the installation process.

If site relocation or re-selling of your containers is an option, then the twistlock bracket mount system is a must-have addition to your Container Dome. Demobilisation is fast and simple, simply unlock the brackets and remove the Dome with no damage to the base rails or your containers.

End walls.

End walls help maximise your working and storage areas by providing full weather protection from the wind, rain and dust.

Both half end walls and full end walls are available depending on your requirements. End walls can be used on one end, or both ends of your Container Dome. A clear opening entry/exit way allows access, and this can easily become fully enclosed using either gates or one of the other sealed door options available.

We can provide self-supporting end wall base rails, meaning no footings or hold downs are required, while still complying with the maximum wind rating for your area.

We also offer the option to use a twistlock mount end wall which can accompany our twistlock mount Container Dome. This means your entire Container Dome setup can be fully twistlock mounted using no hot works on site, and no drilling through containers.

Container hold downs.

Whether you are using your Container Dome as a temporary shelter or a permanent structure, we can help you find a container anchor option to suit your individual needs.

CONTAINER WEIGHTS

All of our standard Container Domes can be secured simply and easily with weight added to the inside of the containers. This is the perfect solution if ground penetration is not possible, if the site will be frequently demobilised and relocated or if the Container Dome is being used as a temporary structure.

CONCRETE FREE ANCHORS

For sites that are temporary or locations where concrete is difficult to access then concrete free anchors are a great hold down option. The anchors can be easily removed upon demobilisation and leave no environmental footprint.

CONCRETE PIERS

Using piers is ideal if your structure is to be permanent, and small-scale excavation and concrete works are easy to carry out on-site. We can give you the required pier depths for your particular shelter and wind region.

SLAB FIXING

If you are positioning your containers on a concrete slab they can be anchored with no welding or drilling. We can even provide you with slab specifications and certification if required.

Container modifications.

Container modifications can really enhance your Container Dome setup.

At Container Domes Australia, we only work with reputable container suppliers throughout Australia to provide you with the perfect mods to suit your on-site requirements.

OFFICE SPACE

Turn any container into office space with a myriad of modification options on offer to suit your individual needs including lighting and electrical, partitioning, internal and external cladding options, hinged and sliding doors and windows.

SIDE REMOVAL

Make the most out of every inch of space in your shelter by removing the container walls for easy internal access everywhere.

WORKSHOP

Your shelter can become a fully-functioning workshop with the addition of shelving and workbenches and any other option you need.

DOORWAYS

Adding a doorway to the side of a container allows for easy access to your storage space from both inside and outside. There is a large range in styles to choose from including roller doors, PA doors, sliding and side hinged options, barn-style gates and more.

Plus an endless amount of other modifications designed to suit your specific needs.

Power and lighting.

Looking for power and lighting solutions?

When it comes to providing power and lighting systems to your Container Dome setup, Container Domes Australia has a wide range of options available that can be tailored to your individual site needs.

From solar systems that can power everything from lights, offices and tools, through to 3 phase power systems that will connect you to the grid.

Our design team have the perfect solution to suit your individual site needs no matter how remote you are.

Relocatable.

Looking for a shelter that offers you permanent protection, but is also easily relocatable?

At Container Domes Australia, we offer the perfect solution with our fully transportable Container Domes.

Key elements that sets us apart from other products on the market are;

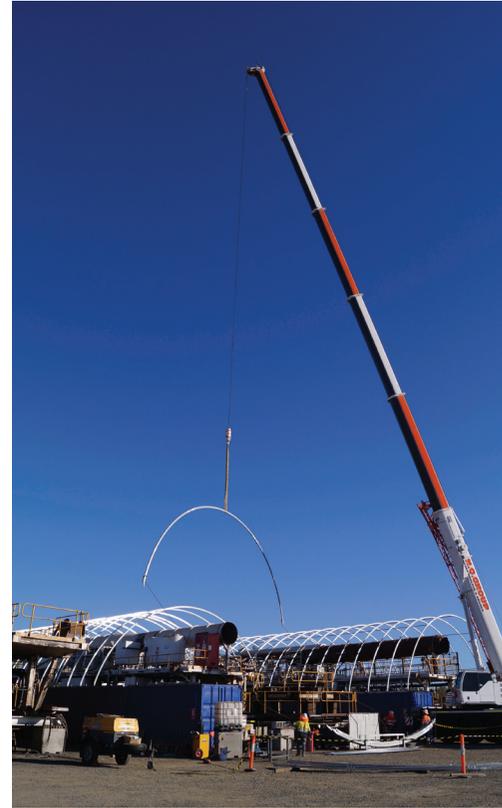

- Our Container Domes have all been designed with a quick, easy and safe installation process in mind.
- We only use the best quality materials available in Australia. All shelters are designed and certified to the highest of Australian standards.
- We offer you complete peace of mind that our shelters can stand the test of time no matter how often it is moved around.

So, whether your shelter is going to stay up or it will be moving from site to site, Container Domes Australia has got you covered.

An easy and safe installation process are two important features of the CDA Container Dome Design.

CDA install team.

Our in-house installation team can make the erection of your Container Dome a simple and stress free process.

Because we have the experience and the know-how, we can get the job done easily, safely, and on time.

We are licensed builders and our in-house installation team are fully ticketed and qualified to carry out any installation project from a small single Container Dome to more complex and large turnkey projects.

We adhere to all standard WHS regulations, but also understand that clients can have individual site requirements as well. At Container Domes Australia, we will work with you to ensure all paperwork is in order and procedures are site-compliant.

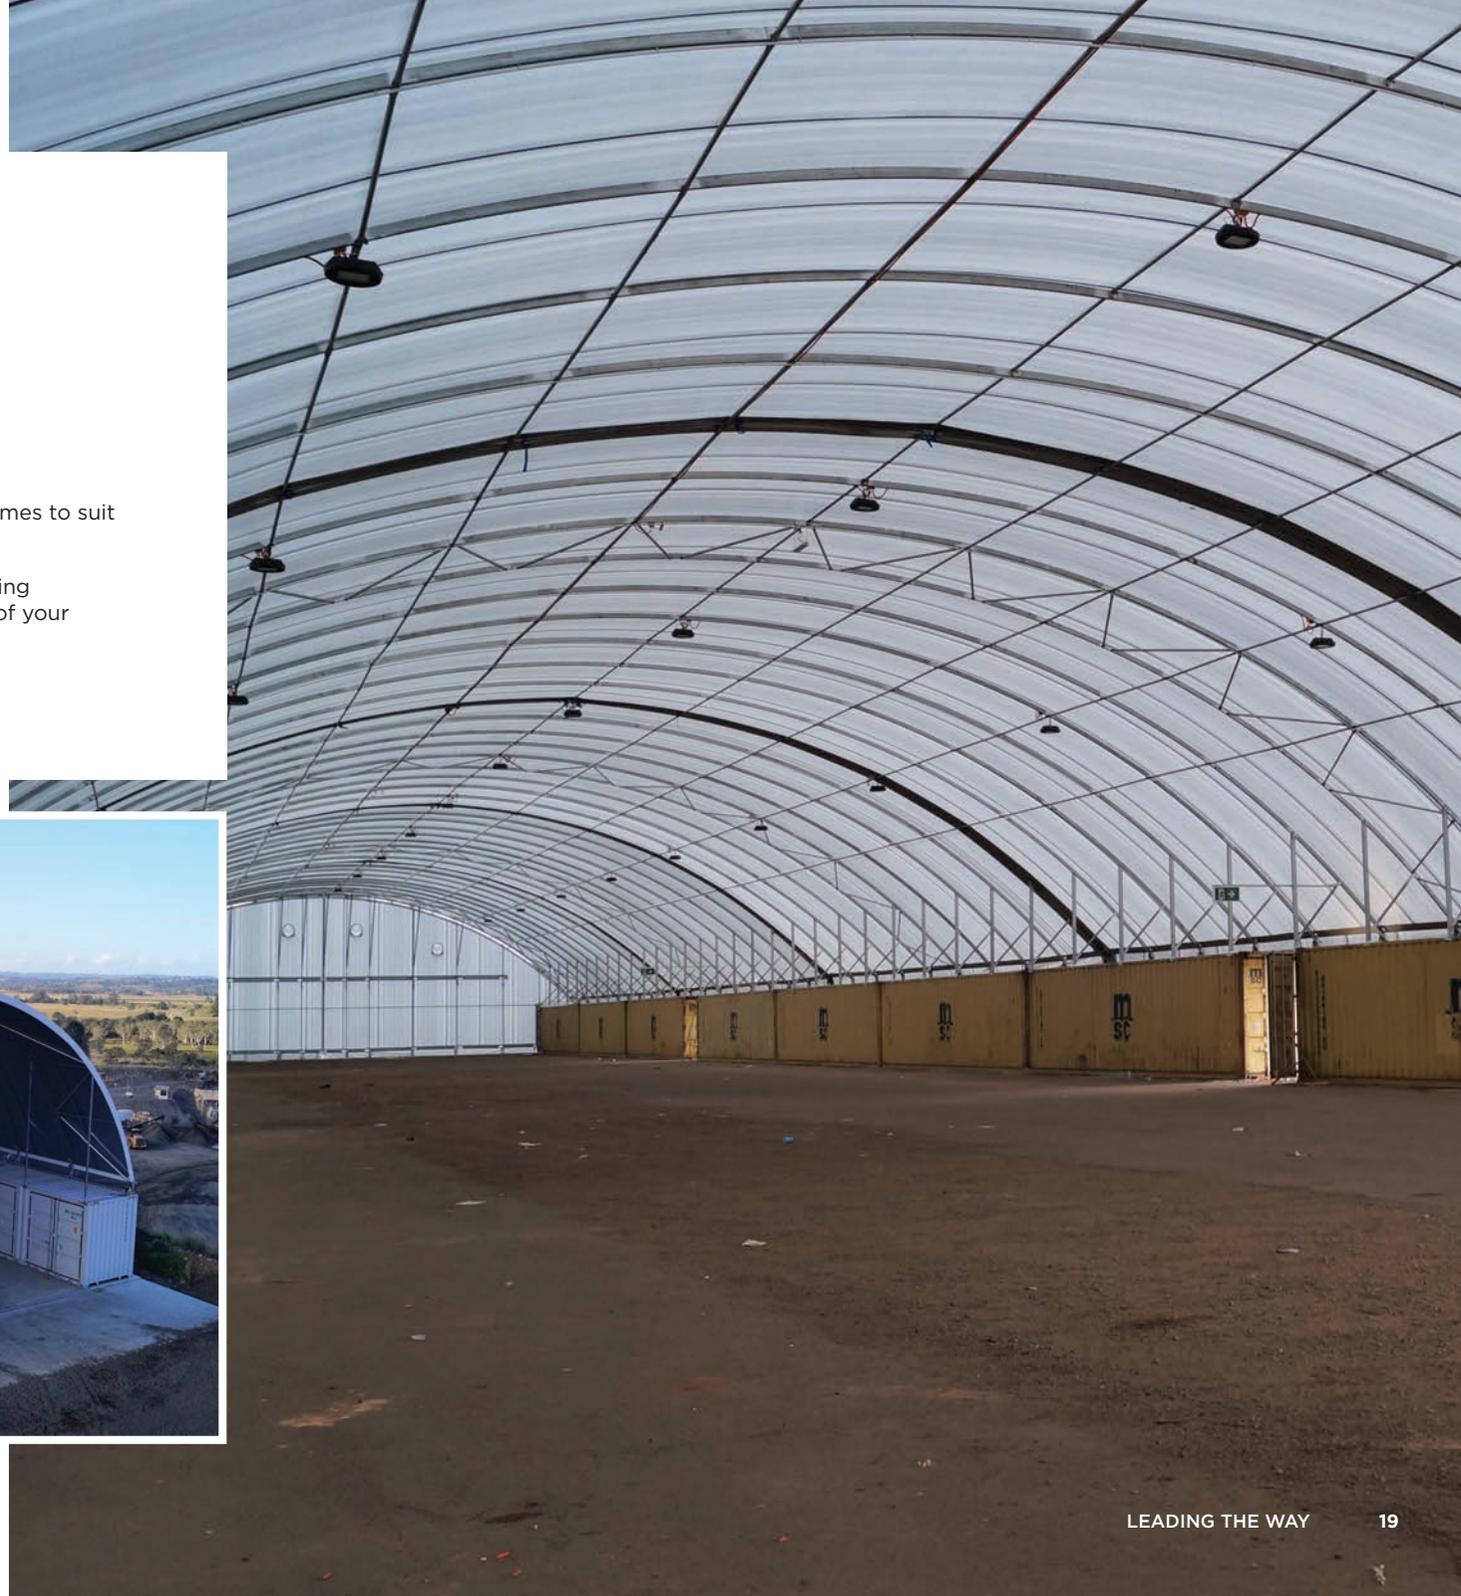

Our installation team travel throughout Australia and the world and we pride ourselves on our excellent safety record.

In-house design team.

Need extra height, width or length?

We are the experts when it comes to creating Container Domes to suit individual and unique sites.

Our in-house design team will work with you through planning and design of your Dome to ensure the structure meets all of your individual requirements.
